New dosing hose SH55 for Argos/Nautilus 2

Wedholms has developed and implemented a new dosing hose for our control unit argos. The new hose has a higher shore value and are therefore more durable and has a longer operating time than its predecessor. The new hose is only adapted and tested for the control unit Argos/Nautilus 2 and should not be used on the Winmaster/Nautilus 1 control units.

The new hose will be sold packaged with 2 tubes together with 1 tube of silicone grease to ensure a good functioning of the dosing pump. The amount of fat is adapted for two dosing tubes. You can find the packages on our webshop, <https://webshop-wedholms.com/en/>.
