

ALCOVE IN LIGHTWEIGHT MATERIAL

Smart option for your Wedholms silo

By equipping your new silo with an alcove, you can reach the silo's control unit, manhole and outlet directly from the milk room without having to build the silo into the wall. This allows an easy installation and keeps costs down. We offer a smart and affordable alcove in durable lightweight material that provides great flexibility and quick installation.

SMART DESIGN

Our alcove differs from the crowd by its smart design. The pre-cut sections in insulated and durable lightweight material are easy to handle and easy to assemble.

Corner profiles in stainless steel make the alcove stable and tight. Thanks to the smart design of the connection profiles to the milk room, these can be steplessly adapted to different wall dimensions. Everything to suit your needs.

The alcove provides easy access to the silo's control unit, manhole and outlet. Control unit and cleaning pump are mounted on the silo body.

QUICK INSTALLATION

If you order a silo with an alcove, the silo body is prepared with connection ledges in stainless steel that enable a quick and easy installation of the alcove on farm.

GREAT FLEXIBILITY

The alcove is delivered with standard dimensions to keep costs down. The sections can be easily cut to the desired length. If necessary, the alcove can be extended by more sections. Contact us if you want a deeper alcove and we can solve it at an additional cost.

As standard, the alcove sections are delivered in white color, but at an additional cost, it is possible to choose between several colors. If you prefer an alcove in stainless steel, we can offer it as well.

CLIMATE AND ECONOMY

The special lightweight material is affordable, durable and withstands harsh outdoor conditions. In addition, the material has a low climate footprint, which makes our alcove a sustainable solution, not only for your economy but also for the environment.

The affordable lightweight material is weather resistant and climate smart.

DIMENSIONS

Width: 1 800 mm

Depth sides: 1 350 mm

Depth center: 940 mm

Height: 2 000 mm

MATERIAL

Fiberglass laminate and stainless steel

PICK-UP ROOM

Convenient option for your Wedholms silo

A pick-up room is a cheaper alternative to the traditional milk room. The insulated and lockable pick-up room accommodates the silo's control unit, manhole, ventilation pipe and outlet and there is also enough space for a sink. The location of the pick-up room around the silo is flexible to facilitate logistics on the farm. We offer a smart and affordable pick-up room in durable lightweight material that provides great flexibility and quick installation.

BRILLIANT DESIGN

The pre-cut sections in insulated and durable lightweight material are easy to handle and easy to assemble. The design with corner profiles in stainless steel makes the pick-up room stable and tight.

ENOUGH OF SPACE

The pick-up room contains the silo's control unit, manhole, ventilation pipe and outlet. The generous area of 3 m² means that there is also room for a sink if desired.

The pick-up room contains the silo's control unit, manhole, ventilation pipe and outlet. There is also enough space for a sink.

QUICK AND FLEXIBLE

The silo is delivered with special connection ledges for the pick-up room and with the control unit and cleaning pump mounted on the silo body, to ensure a quick installation. The location around the silo is optional, which offers flexibility in the logistics around milk collection.

SMART DETAILS

The pick-up room is delivered in a complete set, including walls and ceiling in lightweight material and corner profiles in stainless steel. In addition, the room is equipped with smart details such as grilles for the ventilation shutters and a lockable door with window. The door in lightweight material is equipped with an approved quality lock from Habo with two keys.

CLIMATE AND ECONOMY

A pick-up room saves money compared to rebuilding an existing milk room or investing in a new one. The special lightweight material is affordable, durable and withstands harsh outdoor conditions. In addition, the material has a low climate footprint, which makes it a sustainable solution, not only for your economy but also for the environment.
